## **DETAILED ACTION**

### ***Response to Amendment***

1. According to the Amendment, filed 21 August 2008, the status of the claims is as follows:

Claims 1-9 are currently amended.

### ***Priority***

2. Acknowledgment is made of applicant's claim for priority under 35 U.S.C. 119(a)-(d) based upon an application filed in Japan on 01 March 2004.

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-9 are rejected under 35 U.S.C. 102(a) as being anticipated by Arata, Japanese Patent Publication 2004-049838 ("Arata"), see Translation of Arata.

Claims 1 and 7-9: Arata teaches the following:

a method for determining sleep stages of an examinee (see Abstract and figs. 1, 2, and 5), the method comprising:

detecting signals of the examinee with a non-invasive biosignal detector, such as a heartbeat detector signal detector or pressure detection sensor (see para. 25-26 and 37-41);

calculating a signal strength deviation value that indicates deviation of a signal strength of the detected signals (see para. 27-28); and

determining a sleep stage by using the signal strength deviation value or a value of a plurality of values based on the signal strength deviation value as an indicator value (see para. 55-66).

Arata additionally teaches subject matter of the dependent claims 2-7 (see para. 32-55).
